CEN 5064 - Software Design

Catalog Description:
Study of object-oriented analysis and design of software systems based on the standard design language UML; case studies. (3 credits)

Prerequisite:
CEN 4010 – Software Engineering I or CEN 5011 – Advanced Software Engineering.

Type
Can be an Elective for MSCS, MSIT, MSTN, and Ph.D. students

Course Objective:
The purpose of this course is to conduct in-depth study of object-oriented analysis and design of software systems based on the standard design language UML. Primary topics of study include the use-case driven approach for software analysis, system design and detailed design. In particular, emphasis will be made on how to strengthen major design qualities such as robustness, changeability, interoperability, and reliability via UML based concepts, processes, methods and techniques. If time allows, a complete case study will be discussed.

Topics
Review the phases of the software process (1 week)
Review of UML diagrams used in the phases of the development life cycle (1 week):
Static modeling (2 weeks)
  - Class diagrams
  - Object diagrams
Dynamic modeling (2 weeks)
  - Sequence diagrams
  - State machines
  - Activity diagrams
Software Architectural Design (2 weeks)
  - N-Tier (peer-peer, client-server, 3-tier, 4-tier)
  - Pipe and Filter
  - Repository
  - Service-oriented
  - Event driven
Detailed Design and Design Patterns (2 weeks)
  - Creational
  - Structural
  - Behavioral
  - Concurrency
Model-Driven Software Development (3 weeks)
  - Metamodeling
  - Domain Architectures
  - Model transformation
  - Code generation
Current research (1 week)

Other reading material: Relevant papers from conference proceeding and journals.
